key insights and recommendation

1. Call Answer Performance Out of 1,772 total calls, 1,455 were answered, giving an answer rate of 82.1%. This means 317 calls went unanswered every month, which is a significant loss of customer contact. The average speed of answer was 67 seconds. It is recommended to increase staffing during peak hours to reduce missed calls and bring the answer rate above 90%.

2. Resolution Rate Out of 1,455 answered calls, 1,311 were successfully resolved, giving a resolution rate of 90.1%. While this is a strong number, 144 calls were answered but not resolved. It is recommended to investigate the reasons for unresolved calls and provide additional training or escalation procedures to close this gap.

3. Agent Performance Becky and Martha are the top performing agents with average satisfaction ratings of 3.74 and 3.69 respectively. Stewart and Joe are the lowest performers with ratings of 3.22 and 3.33. It is recommended to study the working style of top agents and use it as a training model for underperforming agents to bring consistency across the team.

4. Speed of Answer vs Customer Satisfaction Analysis shows that calls answered faster tend to receive slightly higher satisfaction ratings. This confirms that response time does impact customer experience. It is recommended to set a target speed of answer below 60 seconds and monitor it monthly to improve overall satisfaction scores.

5. Department Analysis The Fridge department receives the highest call volume, making it the busiest department. The Television department has the best resolution rate while the Air Conditioner department has the lowest. It is recommended to allocate more trained agents to the Air Conditioner department and investigate the common issues causing low resolution rates there.

6. Daily Call Volume Trend Call volume peaks around mid-month (January 15–17) and again near month end. These are high pressure periods for agents. It is recommended to schedule additional staff or shift overlaps during these peak periods to maintain service quality and avoid a drop in satisfaction ratings.
Overall Recommendation OptiConnect Solutions has a solid foundation with an 82% answer rate and 90% resolution rate. The key focus areas for improvement are reducing unanswered calls, closing the performance gap between agents, improving Air Conditioner department resolution, and maintaining faster answer speeds during peak days.
